

Fig. 1

**Results:**

DPL cells can grow in the presence of Diphtheria toxin: While the parent cell line, PER.C6, and 293 wt cells die at  $10^{-10}$  M DT concentrations DPLR1 cells grow at  $10^{-10}$  M DT, DPLR2 cells survive  $10^{-9}$  M DT, and DPLR3 cells survive  $10^{-8}$  M DT (not shown).
